

SureService® Training Program

Rosemount Analytical offers both standard and customized training packages as part of our SureService Customer Support program. With SureService training modules, you can select our standard training modules, customized courses, or a combination of each to develop one-of-a-kind training that fits your specific requirements, and best enables your team of engineers, operators, and technicians to service and maintain your Rosemount Analytical analyzers.

Standard Training Modules

Emerson offers a series of standard analyzer and instrument training classes to ensure that customers obtain the most out of their Rosemount Analytical equipment. Courses consist of small classes involving hands-on sessions, with one-on-one time with instructors. These workshops are the quickest, most economical way to learn critical skills that will help you operate your Rosemount Analytical analyzers.

Standard training courses can be conducted at our facilities in Solon, Ohio, and Houston, Texas or at your facility. Also, we offer regional training seminars based on specific standard courses our customers can attend together and share the costs while benefiting from a shared learning experience.

Customized Training Modules

We also offer customized courses on your gas analyzers. These courses are also available to be conducted at our facility or at your facility, and will be taught by a factory-trained and certified Rosemount Analytical field service engineer with years of experience working on gas analyzers. Each customized course will be tailored in terms of content, application focus, and duration to best fit your specific needs.

Standard Service Training Courses

Course Number	Course Name
2102	951C Chemiluminescence Analyzer
2103	400A Hydrocarbon Analyzer
