

Flow Measurement Services & Solutions

As one of the world's leading companies in the provision of fiscal flow measurement services and solutions, we employ the best people through our graduate training scheme and retain them through our employee retention programmes. We are proud to be able to offer their expertise to you so that you can manage the risk of uncertainty inherent within your measurement systems. We offer:

Audit/Inspection services

Assessing quality and accuracy of equipment and data in respect of technical and contractual agreements for operator, pipeline, third party or legal requirements.

Consultancy services

Offering consultant engineers of varying disciplines to perform feasibility and conceptual design studies, identify and resolve problems, equipment selection sizing and uncertainty analysis, the creation of functional design specifications and the writing of manuals and various procedures.

Field support

Where metering engineers and technicians will ensure your metering system installation, operation and maintenance complies with national and international guidelines as well as client or third party requirements and procedures. This includes factory acceptance testing, installation and commissioning, planned maintenance and record keeping.

Training services

General and client specific training courses, presented by METCO consultants, covering; liquid and gas metering, practical calibration and fault finding. Courses tailored for operations or maintenance personnel.

Spares support

Identifying critical spares and holding them on stock so that in the event of a failure repairs can be carried out promptly.

For further information on how we can help you manage your risk of uncertainty please telephone +44 (0)1224 828588 or e-mail sales@metco-uk.com
